Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:
SR Num: 43
Year: 2014
Applicants: Worcester Regional Transit Authority (WRTA)
Project: The Worcester Regional Transit Authority (WRTA) will cleanup and redevelop an approximate 11 acre parcel located at 40 Quinsigamond Avenue in Worcester, Massachusetts. The property is a portion of a site historically utilized as a former Manufactured Gas Plant (MGP) facility from approximately 1853 to 1969. The project involves the construction of a new 2 -story maintenance and operations facility at 40 Quinsigamond Avenue, Worcester, MA. The total footprint of the project is expected to be approximately 100,000 square feet including office and administrative operations and dispatching, bus maintenance and storage spaces. Additional areas within the Property will be developed for bus circulation, parking, setbacks, stormwater management, landscaping and hardscaping. The WRTA is a public transportation entity providing over 3.6 million rides per year for its customers in Worcester and the surrounding towns. The new maintenance and operational facility will replace an outdated eighty year old facility and will revitalize a vacant and blighted parcel of land currently used for storage of construction equipment and debris. With the proposed relocation of facilities, approximately 160 permanent jobs will be retained and five to ten new jobs will be created. The WRTA will make 170 parking spaces available to the public during athletic league events at the park across the street to address the critical need for parking during such local events, and will provide conference room space for neighborhood meetings.
