

April 8, 2026

To All Bidders:

Subject: **Bid No. 8682-J6, Barricades (Type 2) + Cones / DPW**

ADDENDUM NO. 1

To Whom It May Concern:

With reference to our bid request relative to the above subject, please refer to the changes/modifications/clarifications to the original proposal request.

Questions received by this office and responses from The City:

1. Q: In reviewing the specs for the barricades, the first line says they can be 24" wide or wider, but then the second line says the panels are to be 36" x 8". Are 24" wide okay? The specs say plastic or metal and plastic barricades are only 24" wide. It also looks like 12" or 8" top is acceptable. Please confirm if 24" wide barricades with 8" top and 8" bottom are acceptable. Thanks.

A: Minimum requirements of a type II traffic control barricade are that it must be a minimum of 24" wide x 36" high not including the flasher. The top bar must be either 8" or 12" and feature orange / white engineer grade or hi-intensity reflective stripes at a 45° angle. The bottom bar must be a minimum of 8" high and must also feature orange / white engineer grade or hi-intensity reflective stripes at a 45° angle.

Bidders are requested to acknowledge and/or include this addendum with submission. All other terms, conditions and specifications remain unchanged.

Very truly yours,

Jerry Kucera
Buyer
