CONTRACTOR QUESTIONS

1. Q: Please confirm note number 16 on sheet R1. To what extent will the drainage system need to be cleaned? Is it expected that the GC would provide drain scoping? Will silt sacks be adequate protection to prevent dust & debris from entering the drainage system.

A: Scoping the drains is not required, but will be permitted if the contractor so desires. The extent of protection required is the responsibility of the contractor to determine; drains are expected to flow freely at project acceptance. Drain flushing includes drain bodies and pipes back to the oil / water separator. Vacuuming out the contents of the separator is not required.

2. Q: Spec book temporary facilities section mentions temporary partitions & fireproof protection. Please confirm if this is a requirement for the scope of this project?

A: Contractors are responsible for protective construction as required to protect vehicles outside the area receiving work, from dust and damage. If contractors elect to construct partitions to accomplish that, then those partitions need to conform to the cited requirements. How and what protection is implemented, remains the contractors means and methods for completing the work.
